

Cybersecurity Strategy Review

Security Risk Advisors has accelerators to complete a one week assessment of the cybersecurity program, including capabilities design, crisis and compliance readiness, spend, and appropriateness of Board and executive deliverables.

Alignment to Frameworks

We engage the CISO Office, Compliance and Risk Management to understand the organization's defined risk appetite, and assess the cybersecurity program's high-level program's to established and emerging frameworks including but not limited to the NIST Cybersecurity Framework. We develop an understanding of how the organization coordinates with Business Units, Compliance, Risk and Legal functions to anticipate needs. We understand how the CISO office measures itself to maintain alignment.

Capabilities Assessment

We issue a request list to be completed by the CISO's Office which includes an inventory of controls and their status, responsible and assigned staff and sample deliverables for key security processes including incident response, anomaly detection, privilege management, education and awareness and core protection technologies. We conduct interviews and discuss the cybersecurity program's deliverables to assess the degree of modernization, specificity of controls to meet IT and business needs, quality and consistency of outputs.

Board Deliverables

We review the CISO Office's reports, metrics and deliverables to Senior Management and the Board. We discuss effective practices to create improved transparency and draw attention to areas of need.

Recommendations to Roadmap

We build on these activities to summarize our recommendations for improvement. This includes a review of the CISO Office's existing Roadmap initiatives. We make suggestions for prioritization based on industry trends and emerging good practices. We evaluate risk and reward of large spend initiatives and recommend appropriate changes to staffing, controls automation and management processes. We provide a final assessment of the direction of the cybersecurity program and communicate it to the Board and/or Senior Management.

Differentiators

Recognized Thought Leadership

Security Risk Advisors contributes to cybersecurity thought leadership conferences, including RSA, Gartner, ISC(2), FS-ISAC, NH-ISAC and other knowledge-building organizations. In 2017 we released a cutting-edge freeware reporting and workflow tool for measuring CyberSOC detection rates and improvement.

Advisory, Engineering, and Operations Experience

Our strategic advice comes from a rounded perspective of working with leading companies to develop strategies and implement complex cybersecurity controls. We also operate modern detection and threat hunting controls for global organizations in our 24x7 CyberSOC, which allows us to credibly relate to our most advanced clients.

Independence

We are not a reseller of security software, so we are independent and neutral to recommend best-fit controls, based on our experience implementing and operating them.

Technical and Compliance Roots

Our strategy team leads have deep experience understanding both technical and compliance-oriented complexities of large organizations. We focus on working with top market clients, but we also maintain broad perspective by working with innovating technology start-ups and mission-oriented non-profits.
