

Managed Security Services

24x7x365 Breach Detection, Hunting, and Response

Security Risk Advisors detect and respond to threats using our team of Tier 1, Tier 2, and Tier 3 Security Incident Analysts.

- **Monitoring and Hunting:** We investigate and create Incident Reports which detail the type and scope of attack, recommended remediation procedures, and plan to reduce exposure. We create deep search rules to identify anomalies and suspicious events. We focus on higher risk systems, user groups and emerging attacker techniques.
- **Notification:** We provide Incident Reports through a secure web portal, email notifications, and texts/phone calls based on the defined IRW, response times and service level agreements.
- **Remediation Assistance:** We help execute and scale remediation plans. Our CyberSOC and certified forensics examiners work within your tools to help fully remediate incidents. We socialize Incident Reports and coordinate teams to action defined remediation procedures.
- **Reporting:** We consistently document ticket closure, mean-time-to-respond, and related metrics. We document monthly Executive Summary Reports to review overall attack trends and needs.

Configuration Management

We configure detection and hunting policies and tune them on an ongoing basis to identify potentially malicious activity. We design and implement policies based on our security monitoring experience and your custom use cases.

Device and Architecture Management

We monitor and maintain the health and availability of your tools by installing patches, troubleshooting technical issues, keeping the solutions functioning as expected, and designing and coordinating changes to tool architecture as needed. We design and implement changes to the architecture to respond to changing locations and requirements. We coordinate the moving, sizing, and acquisition of devices and software.

Differentiators

Not a Reseller

We are independent and vendor-neutral to recommend the best-fit controls for your environment.

Build a Lasting Capability

We implement, engineer and operate on-premises solutions. We do this to develop a lasting capability that remains with your organization.

Your Custom Workflow

We establish a custom incident response workflow (IRW) and runbook with you. We use your ticketing system to collaborate with your team.

Attacker Mindset

We defend with an added attacker's perspective: our engineers who write detection rules include professionals with extensive red and purple team experience.

Active Threat Hunting

We actively hunt for threats based on threat intel and business risk rules collaboratively defined with you.

About Our Company

Security Risk Advisors provides expert consulting services with specializations in advanced threats controls implementation and 24x7 operation, red and blue teams, control frameworks, and GRC process improvement. Our approach emphasizes ongoing knowledge transfer and access to our analysts.
